

Hoop Locking Ring Roll Forming Machine

Working Process

Uncoiling → Leveling → Rolling Forming Machine → Bending Cut Off

Introduction

Automatic Cutting Machine

Forming Machine

Automatic Control System

01

Automatic Uncoiler

02

Precise Leveling Machine

The steel surface wear is small; the computer design, guarantees the piece shape precision, does not scratch the sheet material.

03

Forming Machine

Sheet will from through 8 rollers, and gradually roll into the finished bracket. By the variable frequency motor, reducer, gear, roller group composition. The lathe with welded structure, to stress treatment;

04

Correction of the head Turks head

05

Guide Device

The coil is accurately introduced into the first forming wheel with the digital position display.

06

Bending, Cut off
