Hoop Locking Ring Roll Forming Machine

Working Process

Uncoiling → Leveling → Rolling Forming Machine → Bending Cut Off

Introduction

Automatic Cutting Machine

Forming Machine

Automatic Control System
01 Automatic Uncoiler

02 Precise Leveling Machine
The steel surface wear is small; the computer design guarantees the piece shape precision, does not scratch the sheet material.

03 Forming Machine
Sheet will from through 8 rollers, and gradually roll into the flanged bracket. By the variable frequency motor, reducer, gear, roller group composition. The lattice with welded structure, no stress treatment.

04 Correction of the head
Turks head

05 Guide Device
The coil is accurately introduced into the first forming wheel with the digital position display.

06 Bending, Cut off
